

A single data realisation from the 2D Gaussian model: $\boldsymbol{\theta}_{\text{obs}} \sim p(\boldsymbol{\theta})$, then $\mathbf{x}_{\text{obs},k} \sim p_k(\mathbf{x} \mid \boldsymbol{\theta}_{\text{obs}})$

Prior: $\mathcal{N}([1, 1]^\top, 2 \mathbf{I}_2)$

Likelihoods at $\boldsymbol{\theta}_{\text{obs}}$: $\sigma^2 = 0.03$, $\boldsymbol{\ell} = (0.05, 0.05)^\top$, $\varepsilon = 0.5$
